

Change Management Progress

1. Introduction

Following the new requirement that system functions both have changed in candidates and employees sides. All team members reviewed the existing system design and identified several aspects that need to be changed and improved to align with the new requirements. Here is the key changes :

- **Candidate Profile Enhancement**

The original candidate information was too basic, making it difficult to achieve accurate matching. To address this, we have added new fields such as work experience, skills, preferred working style, and preferred job location to improve matching effectiveness.

- **Searching Function Improvement**

Here are natural and professional English versions for each of your three options:

The original search relied mainly on keywords and was limited. Right now improved it by adding filters (location, job type) and introducing fuzzy search for minor input errors.

- **Add Membership Feature function**

The new system required adding a membership system to differentiate user access. Members can view unlimited recommendations, whereas non-members are restricted to the top 10.

- **UI and System Design Update**

We have updated the Figma design and UML diagrams to reflect the new features and ensure consistency across the system.

2. Summary

Overall, this update improves functionality, usability, and accuracy. The new design better meets project requirements and delivers a more practical and efficient recruitment platform.
